

Here is the cool part. Using a piece of Press'n Seal, cover your image completely and press it down with some form of straight edge (credit cards work great). Gently peel the whole thing off the glass. The Press'n Seal will hold your covering in location and allow you to move it to your model.

Again apply Windex to your clean, dust-free model followed by placing your Press'n Seal/image assembly in the desired location. Squeegee the excess Windex and bubbles out as you did when you put the covering on the glass sheet.

After a reasonable period of time (overnight is recommended) using your heat gun on low heat, gently play the heat onto the Press'n Seal to get it to release from your model's covering and the covering your image is made of. You should now have your image securely located on your model and looking great! It's recommended that you go back over the edges with some trim solvent or acetone to ensure a good bond.

This idea has been condensed from several posts in RC Universe by Vic W. The thread can be found at [RCUniverse Covering Forum](http://RCUniverse Covering Forum).

A group of chess enthusiasts checked into a hotel and were standing in the lobby discussing their recent tournament victories. After about an hour, the manager came out of the office and asked them to disperse. "But why?", they asked, as they moved off. "Because," he said, "I can't stand chess-nuts boasting in an open foyer."
